

## **79080 Semi-Oil**

Our semi-oil consists of equal parts of linseed oil varnish and balsamic turpentine oil, just as it did back then.

Nowadays, other oil-thinning solvents are also used, especially by conventional paint manufacturers.

It is used for the basic treatment of surfaces, as it is particularly well absorbed due to the solvent content and produces greater surface durability. During application, the evaporating solvents pollute the room air.

Well suited for pre-painting wood.
